

Schematic of the investment scheme of VIVERRA®

Characteristics of the program

The program is a comprehensive system that consists of:

- Viverra® Network of surgeries
- Viverra® Wellness clinics
- Viverra® Top clinics
- Viverra® Network of biochemical laboratories

Diagnostic Centres - Surgery

Objective of this program is to develop diagnostic centres - surgeries focusing on preventive diagnosis of cancer and cardiovascular diseases. In principle, their main task is to find and identify the problems what a client/patient has, respectively confirm that his condition is satisfactory. Center instrumentation will consist of a new generation of diagnostic tools. Center can be equipped with devices and treatment depending on the level of equipment in the center. The advantage compared to today diagnostic facilities used procedure is mainly that work on the principle of non-invasive and the results available to the doctor immediately after the measurement. Which mainly reduces examination time and improves the accuracy of diagnosis of the patient set.

Mini-Clinic – WELLNESS CLINIC

Objective of this program is to develop diagnostic - therapeutic WELLNESS clinics working in outpatient/ambulance principle. Instrumentation clinics will consist of a new generation of diagnostic and therapeutic appliances and equipment. Advantage of these diagnostic equipment over today used procedure is mainly that work on principle of non-invasive and the results for the examining doctor is available immediately after the measurement. Which mainly reduces examination time and improves the accuracy of diagnosis for the patient. Subsequently also transferred treatment will be carried out to a new generation of medical devices. Patients procedures will be transferred in outpatient principle. Wellness Clinic has the status of day care, this means in the clinic is located pension, which provides accommodation for the clients as required by the nature of the procedure, respectively if it is a medical resident.

TOP Clinic

This is a clinic focused on the treatment of cancer clinical stages. For the purpose of the system is expected to be the territory about 5 to 7 millions residents to build one of this clinic. The instrumentation will be the same as will be in the Wellness clinics, the new generation of diagnostic and therapeutic appliances and equipment.

We can say that it will be, one of the most modern facilities of its kind in the European Union in terms of equipment. This clinic will be a private medical facility capable of solving even the most complex pathologies occurring in oncology practice, but with a higher efficiency.

Biochemical Laboratory

The role of biochemical laboratories is to do extended laboratory evaluations of samples supplied by the network of Diagnostic centres and Wellness clinics, as well as related examination rooms located in the above-mentioned types of operating units of Viverra system. Equipment will be the world's best. They will be equipped with the newest generation of technology.

Scheme of “VIVERRA 10 + 1”

Scheme of Viverra 10 + 1 is a partial implementation of the program Viverra which ensures optimum economization on investment for the investor of a higher level than the owner franchises this mean a Diagnostic Center (DC).

In this case, Ten DC will being built in the area which has about 1.2 to 1.5 mil. population.

The role of the DC is to meet capacity Wellness Clinic (WC) with the assumption of higher demand as is the technological capacity of WC. With this is provided the optimal economization of investment, as it was already mentioned above.
